Asia-Pacific Progress in Sustainable Energy

ACCESS TO ENERGY

by 2030

ensure universal access to
modern energy services

PROGRESS IN INCREASING ACCESS TO ELECTRICITY

2012-2014 RESULTS: **ELECTRIFICATION**

In the years 2012-2014:

- ▶ **93.1 million** people gained access to electricity.
- ▶ The rate of electrification rose from **89.8%** to **90.3%**.

2012-2014 RESULTS: ELECTRIFICATION

- ▶ *Regional progress in electrification continued, but slowed.*

2012-2014 RESULTS: ELECTRIFICATION

Reporting period	Electrification rate	Average annual change in share	No. of people who gained access
2010-2012	90.3%	2.2%	154.1 million
2012-2014	89.4%	0.5%	93.1 million

2012-2014 RESULTS: ELECTRIFICATION

Number of people with access to electricity 1990-2014

—●— Total population —●— Population with access

NUMBER OF PEOPLE WITHOUT ACCESS TO ELECTRICITY 2014 (millions)

More than 421 million people, or 9.7% of the Asia-Pacific population, remains without access.

Asia-Pacific countries: 23 have yet to reach universal electrification

Access to electricity in Asia-Pacific has increased over the last 25 years, with the gap between urban and rural access gradually narrowing

DRIVERS: POLICIES AND PROGRAMMES

NUMBER OF ASIA-PACIFIC COUNTRIES WITH ENERGY ACCESS TARGETS

Data compiled by author from information available in the Asia Pacific Energy Portal. Available from <http://asiapacificenergy.org>

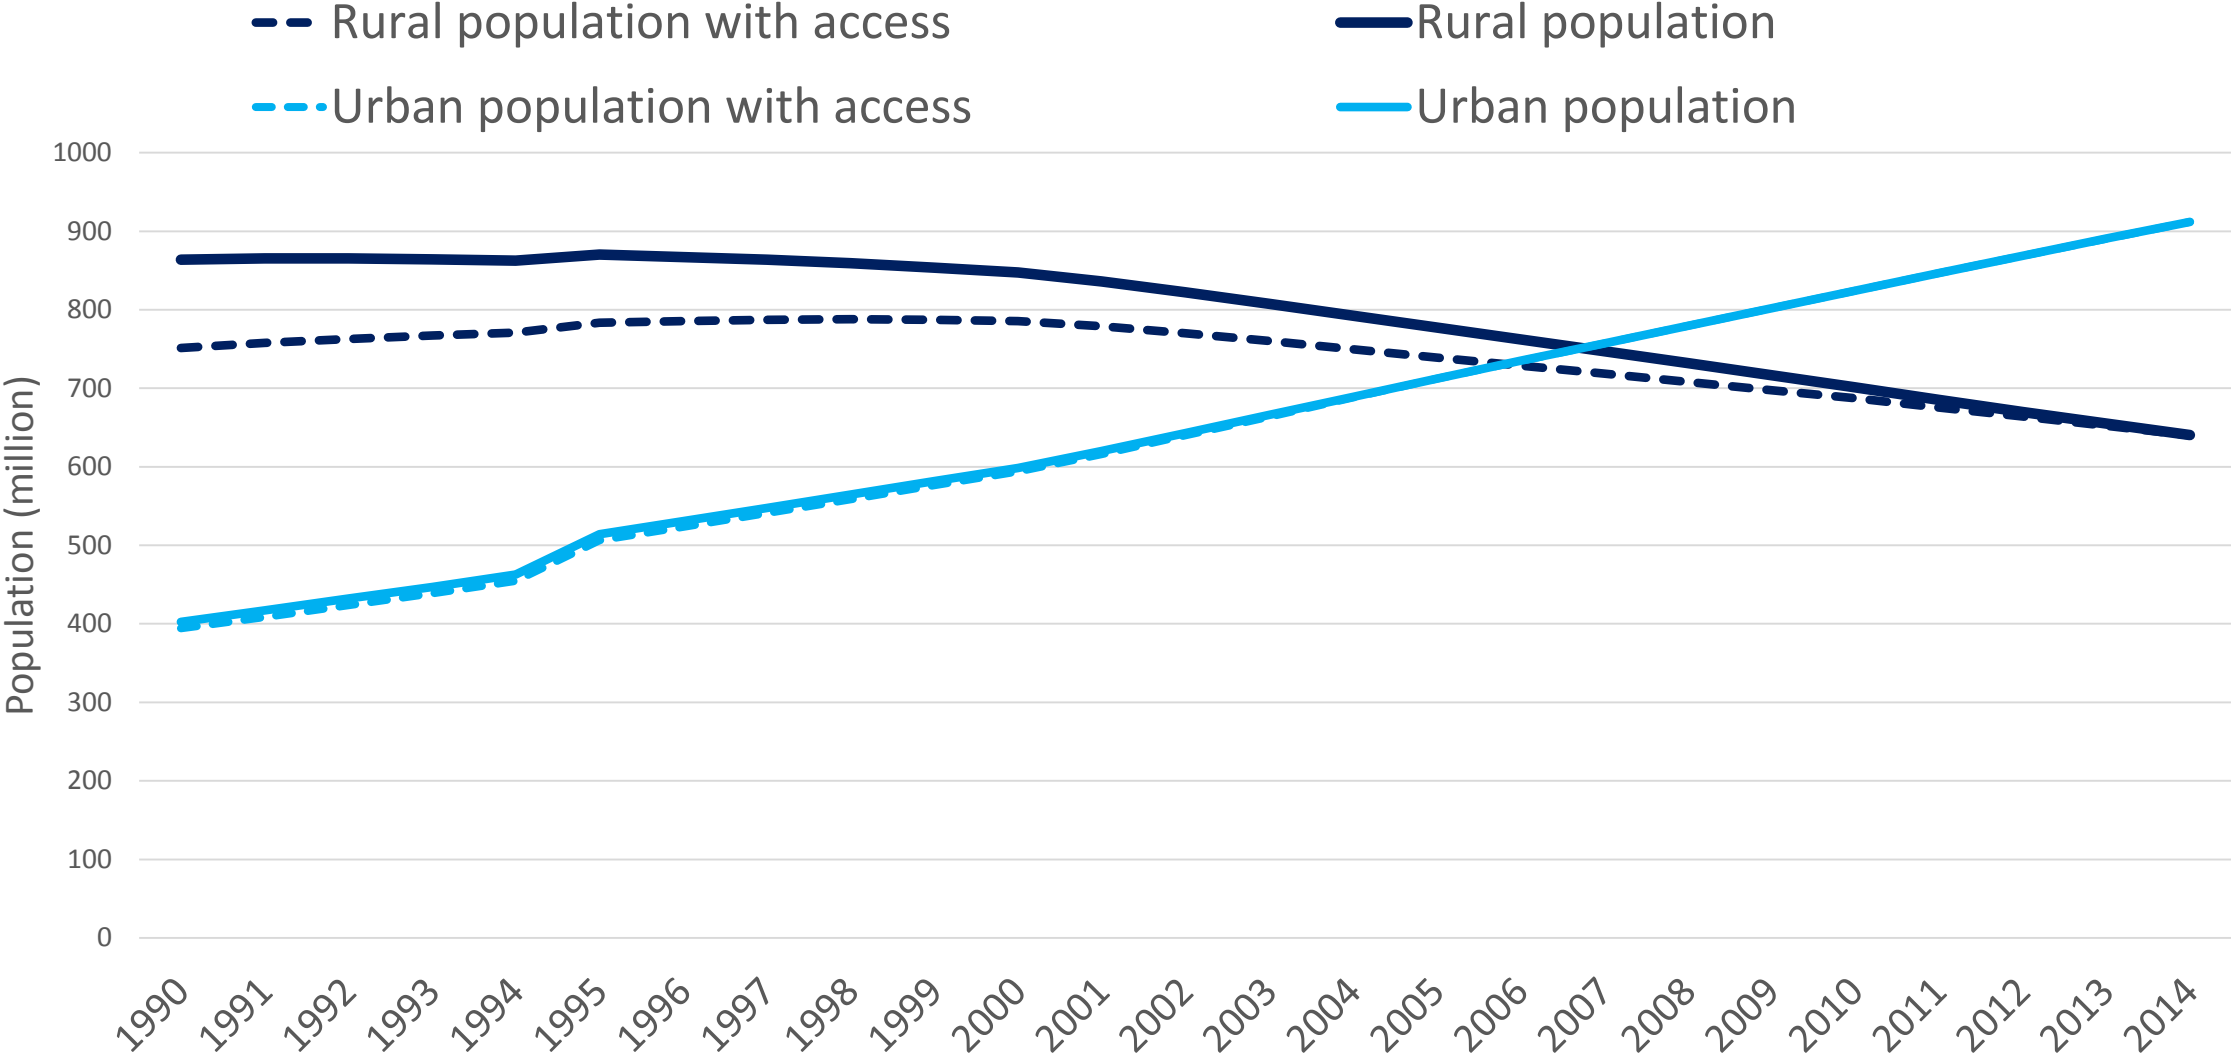

DRIVERS: **INFRASTRUCTURE**

- ▶ ***On- and off-grid infrastructure development increased access rates.***
 - ▶ Countries worked to extend, link, and upgrade power systems to support new connections.
 - ▶ Small, decentralized systems are proving an increasingly viable option for providing power to remote communities.

DRIVERS: **URBANISATION**

- ▶ *Urbanization is bringing more people closer to energy services.*

RURAL AND URBAN NUMBER OF PEOPLE WITH ACCESS TO ELECTRICITY IN EAST AND NORTH-EAST ASIA 1990-2014

DRIVERS: PRIVATE SECTOR

- ▶ ***Private sector interest and participation in electrification is growing.***

INVESTMENT IN OFF-GRID SOLAR COMPANIES AND INTERMEDIARIES BY ASSET CLASS, AFRICA AND ASIA

Source: Bloomberg New Energy Finance, GOGLA. Note: no dates were available for an additional \$60 million of investments. Includes funds raised by intermediaries with energy access mandates that are likely to focus heavily on off-grid solar.

CHALLENGES: INSUFFICIENT FINANCING AND INVESTMENT

- ▶ \$45 billion in investment is required globally on an annual basis.
 - ▶ 2012 investment was \$9 billion, leaving \$36 billion investment unfilled that year.
- ▶ Achieving higher tiers of access requires significantly more investment.
- ▶ Government budgets are insufficient to meet needed investment levels.

CHALLENGES: UNDERDEVELOPED POLICY, REGULATION, AND STANDARDIZATION

- ▶ Potential overlaps of electrification efforts between government agencies, utilities, and private actors;
- ▶ Regulatory uncertainty or lack of policy inhibits private sector investment;
- ▶ Inadequate standards for decentralized systems create regulatory challenges as well as inefficiencies for on-going maintenance.

CHALLENGES: REACHING RURAL AREAS

Rural areas create challenges due to:

- ▶ Small settlements located far from power supplies;
- ▶ High costs of building and maintaining infrastructure in rural areas;
- ▶ Low demand, poor collection rates, subsidized tariffs
→ low or negative returns for utility operators.

CHALLENGES: IMPROVING CAPACITY AND AFFORDABILITY OF OFF-GRID SYSTEMS

Benefits and uptake are constrained by:

- ▶ Low-capacity off-grid power systems;
- ▶ Shorter hours of availability;
- ▶ Relatively higher costs of energy services.

CHALLENGES: PROVIDING RELIABLE ACCESS AND EQUITABLE BENEFITS

- ▶ Socioeconomic benefits of electrification are tied to the quality of energy service and the ability to consume power.
- ▶ Benefits accrue to those who have access to and can afford to consume higher levels of energy.

PROGRESS IN INCREASING ACCESS TO CLEAN COOKING

2012-2014 RESULTS: CLEAN COOKING

- ▶ *Progress remains slow in increasing access to clean cooking (with some national cases of reported declining access rates), falling well short of the pace needed.*

Progress remains steady and slow

Annualized change in share (percentage points)

Share of population with access to clean cooking (%)

Asia-Pacific countries: 32 have yet to reach universal clean cooking

Share of population with access to clean cooking, 2014 (%)

Annualized change in share, 2012-14 (percentage points)

PEOPLE WITHOUT ACCESS TO CLEAN COOKING 2014 (millions)

Nearly 2.1 billion people remain without access to clean cooking.

2012-2014 RESULTS: CLEAN COOKING

- ▶ ***Some countries demonstrated impressive progress in increasing access rates over the 2000-2014 period.***

DRIVERS: INCREASED GOVERNMENT FOCUS

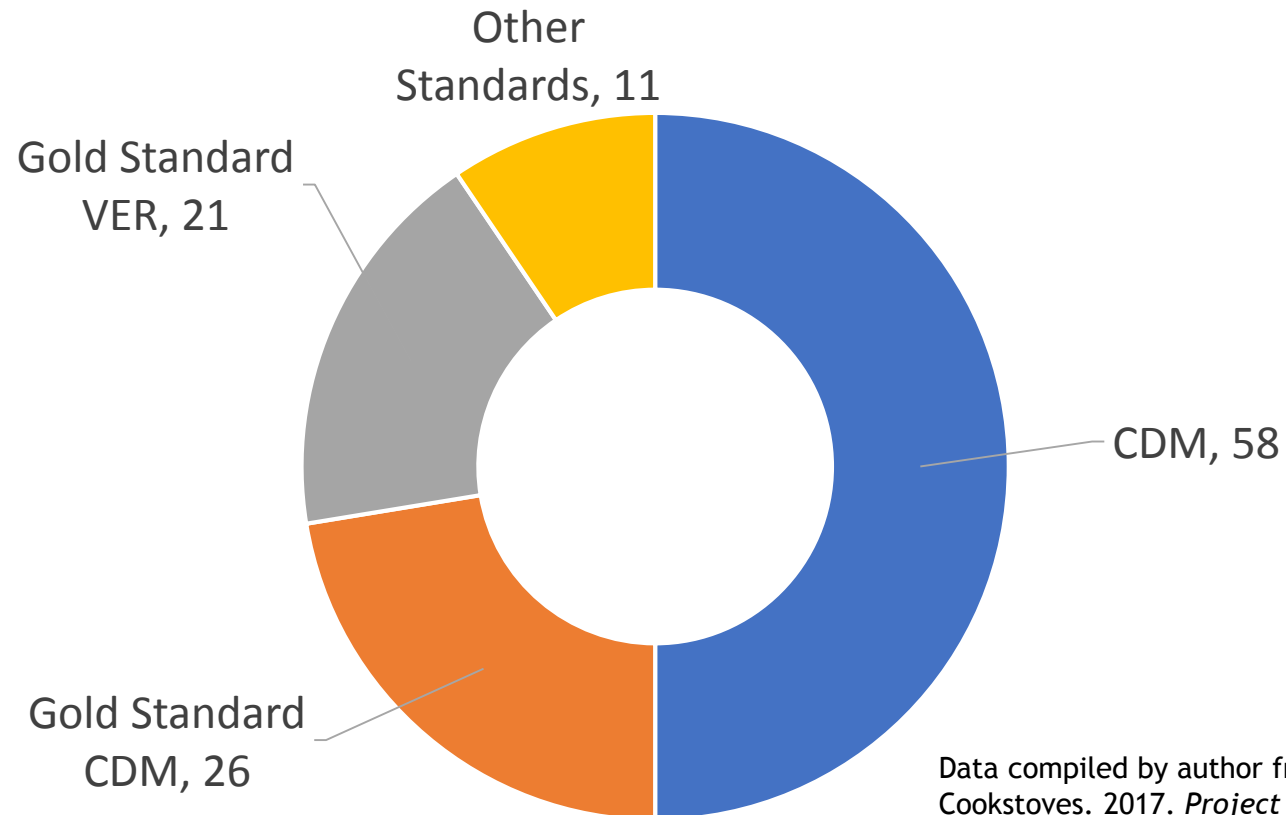

- ▶ ***Policies and programmes were implemented with recent introductions suggesting future increased rates of improvement***
 - ▶ Policy targets and programmes;
 - ▶ RD&D for clean cooking technologies;
 - ▶ Subsidy mechanisms to lower cost of clean fuels and cooking appliances.

DRIVERS: NEW SOURCES OF FINANCE

- ▶ ***Carbon financing is supporting development of the clean cooking sector.***

DRIVERS: CARBON FINANCE

CARBON FINANCE PROJECTS BY STANDARD IN ASIA AND THE PACIFIC

Data compiled by author from Global Alliance for Cookstoves. 2017. *Project Map*. Available from <http://carbonfinanceforcookstoves.org/tools/project-map/?scale=all&standard=all&issuing=>

CHALLENGES: POLICY INTEGRATION

- ▶ Clean cooking is not well-linked within broader energy and development policy frameworks;
- ▶ Programmes are often ad hoc, underfunded, and poorly monitored.

CHALLENGES: COMPETITION WITH TRADITIONAL COOKING OPTIONS

Clean cooking options are not always:

- ▶ Available and affordable;
- ▶ Equal or superior in performance and utility;
- ▶ Designed with consideration of cultural preferences.

CHALLENGES: UNCERTAIN DELIVERY OF INTENDED BENEFITS

- ▶ Studies suggest intended health benefits may not be delivered.
- ▶ More data is required to understand health and gender benefits of clean cooking.

CHALLENGES: INSUFFICIENT FINANCING AND INVESTMENT

- ▶ \$4.4 billion in investment is required globally on an annual basis;
 - ▶ 2012 investment amounted to just \$0.1 billion, leaving a \$4.3 billion gap;
- ▶ Financial institutions have yet to mainstream clean cooking into lending portfolios;
- ▶ Small- and medium-scale entrepreneurs of clean cooking solutions often lack access to investment and working capital.

CONCLUSIONS: FACTORS FOR EXPANDING ACCESS TO SUSTAINABLE ENERGY

- ▶ Getting the design right - delivering energy services that meet consumer needs;
- ▶ Working toward greater affordability;
- ▶ Expanding markets for clean energy solutions;
- ▶ Increasing women's participation in decision-making and productive activities.
- ▶ Engaging the private sector;
- ▶ Broadening investment and finance options;
- ▶ Increasing data quality and sharing knowledge;
- ▶ Better understanding and quantification of the benefits of various approaches to energy access.

Thank you.

The background features a series of overlapping, semi-transparent geometric shapes in shades of orange and red. These shapes are primarily triangles and quadrilaterals, creating a dynamic, layered effect on the right side of the slide. The colors range from a light, pale orange to a deep, vibrant red. The overall composition is clean and modern, with the text 'Thank you.' centered on the left side in a matching orange-red color.
