you own the air you breathe

it's time you own the water you drink

SOURCE™ Drinking Water Solar Panel

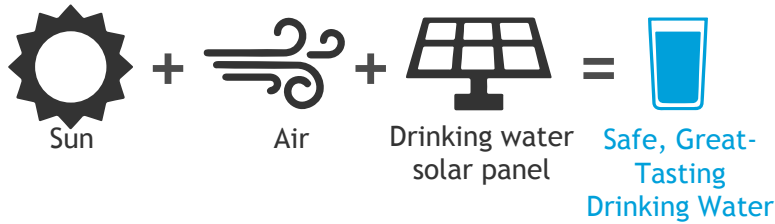

A solar panel that makes water from air

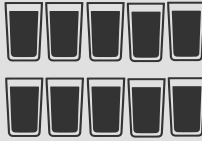

Self-contained and elegant design

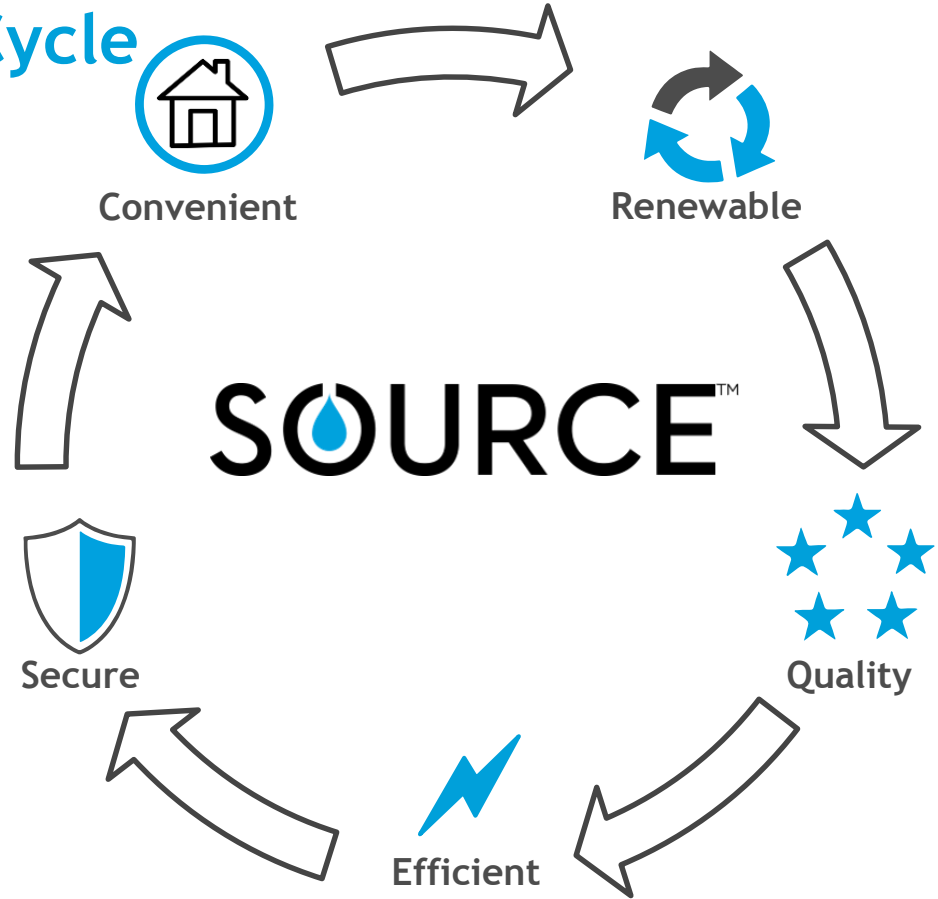

Makes, mineralizes, and pumps drinking water to an in-home tap

Mobile dashboard shows real-time panel performance

SOURCE™ - A Virtuous Cycle

Fetching

Fetching water has an economic impact and disproportionately impacts women and children.

Bottled

Bottled water is resource consuming, expensive to customer, & accounts for 2% of man-made CO2 emissions

Centralized Municipal

Aging, municipal infrastructure is vulnerable to contamination - lead contamination, boil advisories, etc.

SOURCE Facts

INNOVATIVE

First ever infrastructure-independent water generation

RENEWABLE

Supply refreshed each day when the sun comes up, tapping into inexhaustible supply of vapor in the atmosphere

EFFICIENT

When compared to bottled water SOURCE is environmentally efficient and cost-saving

CONVENIENT

Your drinking water where you need it. Water is connected to a drinking water tap in your home, office, school or clinic

QUALITY

Great-tasting water without the contamination vulnerability of a complex supply chain or distribution system

SECURE

There when you need it. Infrastructure-independent means you have resource security

Storing Solar Energy in a Glass

SOURCE solar-
powered
drinking water
is there when
you need it

Our new-to-the-world solar technology bypasses the energy-storage challenges of solar PV & the infrastructure vulnerabilities of water distribution while offsetting the energy consumption of bottled water
