# Materials

The car body of ET adopts high-strength and lightweight materials, which have excellent performance and positive impact resistance, chemical corrosion resistance, thermal stability, and waterproof capacity. Such materials do not only improve the safety of the body, but also extend the service life.

# Frame

The CAE optimization analysis of ET's body shows that the pressure points of the entire vehicle are evenly distributed on the frame. It has also passed the professional crash tests, and met all safety standards. Your driving experience with ET will be safe and worry-free.

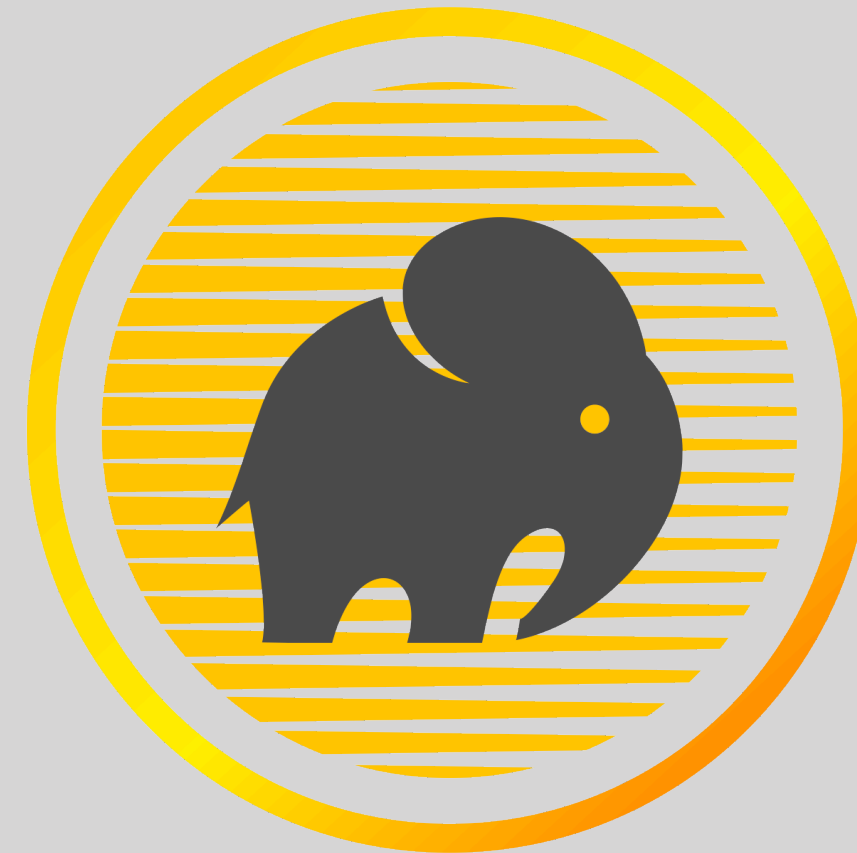

# Batteries

ET adopts the special maintenance-free power battery for vehicles with a range of 150km. The battery has an ultra-high capacity of 100AH. ET select and use High-end manufacture battery and has battery recycle agreement with manufactory.
