

# **SOLAR PHOTOVOLTAIC PUMPING FOR AGRICULTURAL IRRIGATION**

**ASIA SOLAR ENERGY FORUM (ASEF) - JUNE 05, 2018**

**Md. Sakil Ibne Sayeed**  
**Deputy Director (Technical) and**  
**Project Director, Solar Photovoltaic Pumping for**  
**Agricultural Irrigation Project**  
**Bangladesh Rural Electrification Board (BREB)**

# Overview of Bangladesh Power Sector

# Present Structure of Power Sector (1/5)

## Apex Institution

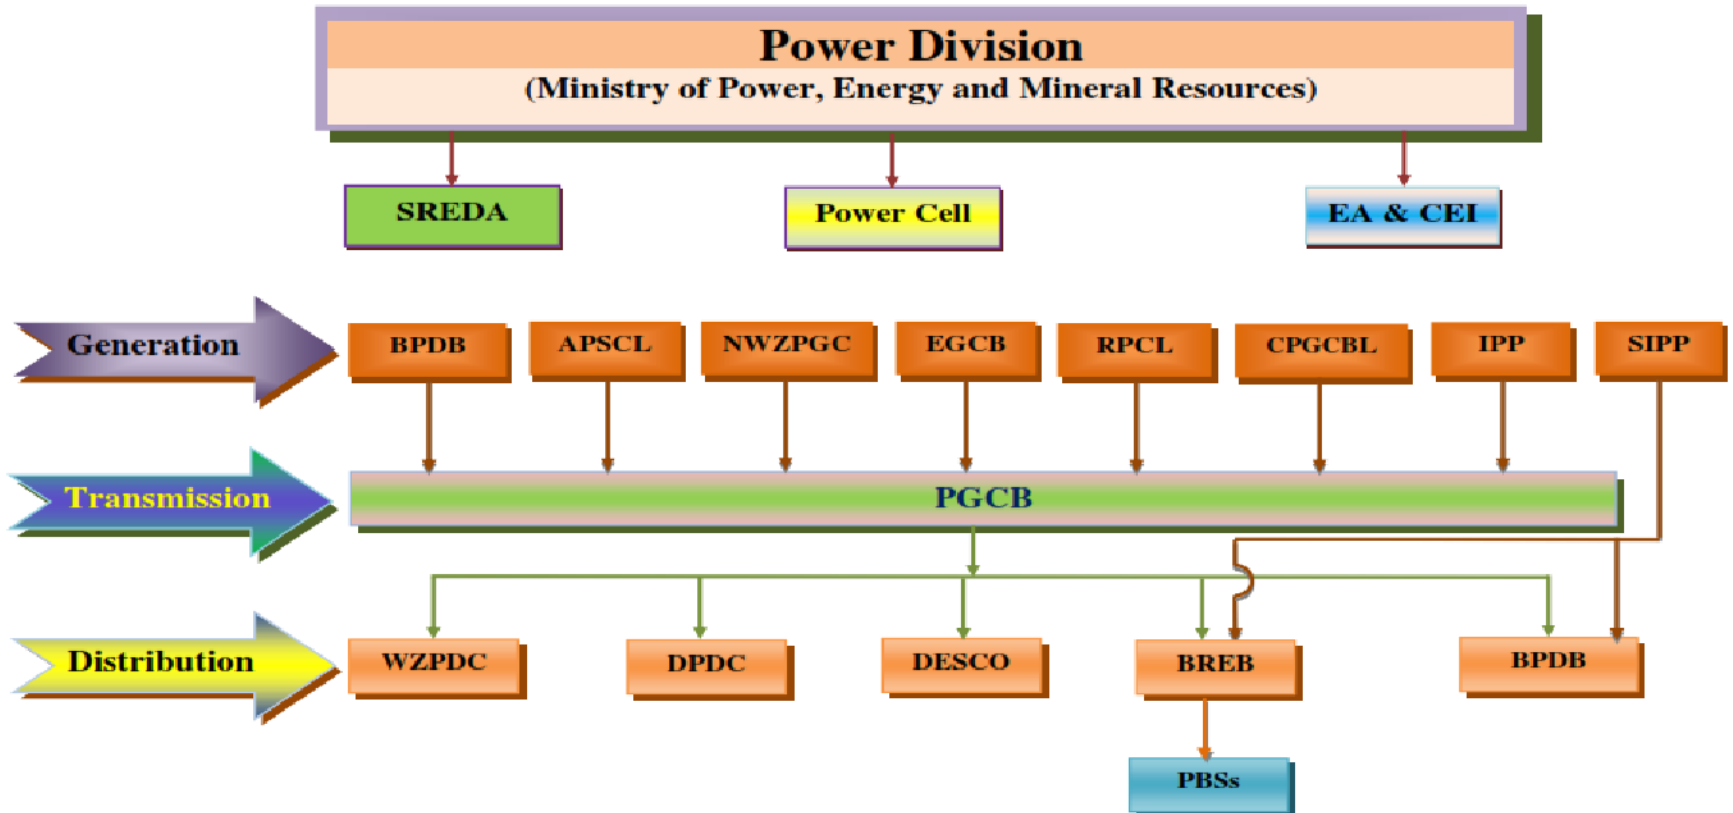

Ministry of Power, Energy & Mineral Resources (MPEMR).

- Energy & Mineral Resources Division
- **Power Division**

## Regulator

Bangladesh Energy Regulatory Commission (BERC).

# Present Structure of Power Sector (2/5)

[Source: <http://www.powerdivision.gov.bd/>]

# Present Structure of Power Sector (3/5)

## Generation

- ❑ Bangladesh Power Development Board (BPDB).
- ❑ Ashuganj Power Station Company Ltd. (APSCL).
- ❑ Electricity Generation Company of Bangladesh (EGCB).
- ❑ North West Power Generation Company Ltd. (NWPGCL).
- ❑ Rural Power Company Limited (RPCL).
- ❑ B-R Powergen Ltd.
- ❑ Independent Power Producers (IPPs).

# Present Structure of Power Sector (4/5)

## Transmission

- ❑ Power Grid Company of Bangladesh Ltd. (PGCB).

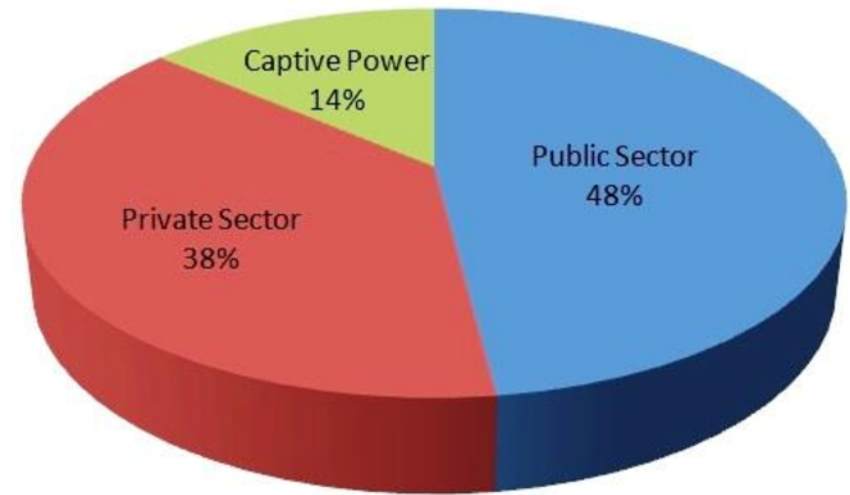

# Present Structure of Power Sector (5/5)

## Distribution

- ❑ Bangladesh Rural Electrification Board (BREB) through Rural Co-operatives (PBSs).
- ❑ Bangladesh Power Development Board (BPDB).
- ❑ Dhaka Power Distribution Company (DPDC).
- ❑ Dhaka Electric Supply Company Ltd (DESCO).
- ❑ West Zone Power Distribution Company (WZPDC).
- ❑ Northern Electric Supply Company Limited (NESCO).
- ❑ Coal Power Generation Company Bangladesh Limited (CPGCBL).

# Present Installed Generation Capacity

| Sector              | Owner            | Installed Generation Capacity (MW) |

| 06. | System loss (80 PBSs)         | 9.91%                                |
| 07. | Peak demand                   | 6,200 MW                             |
| 08. | Consumer                      | 2,25,00,000<br>(Irrigation 3,20,000) |
| 09. | Access to Electricity         | 83%                                  |

# Bangladesh Renewable Energy Initiative

# Potential of Solar Energy

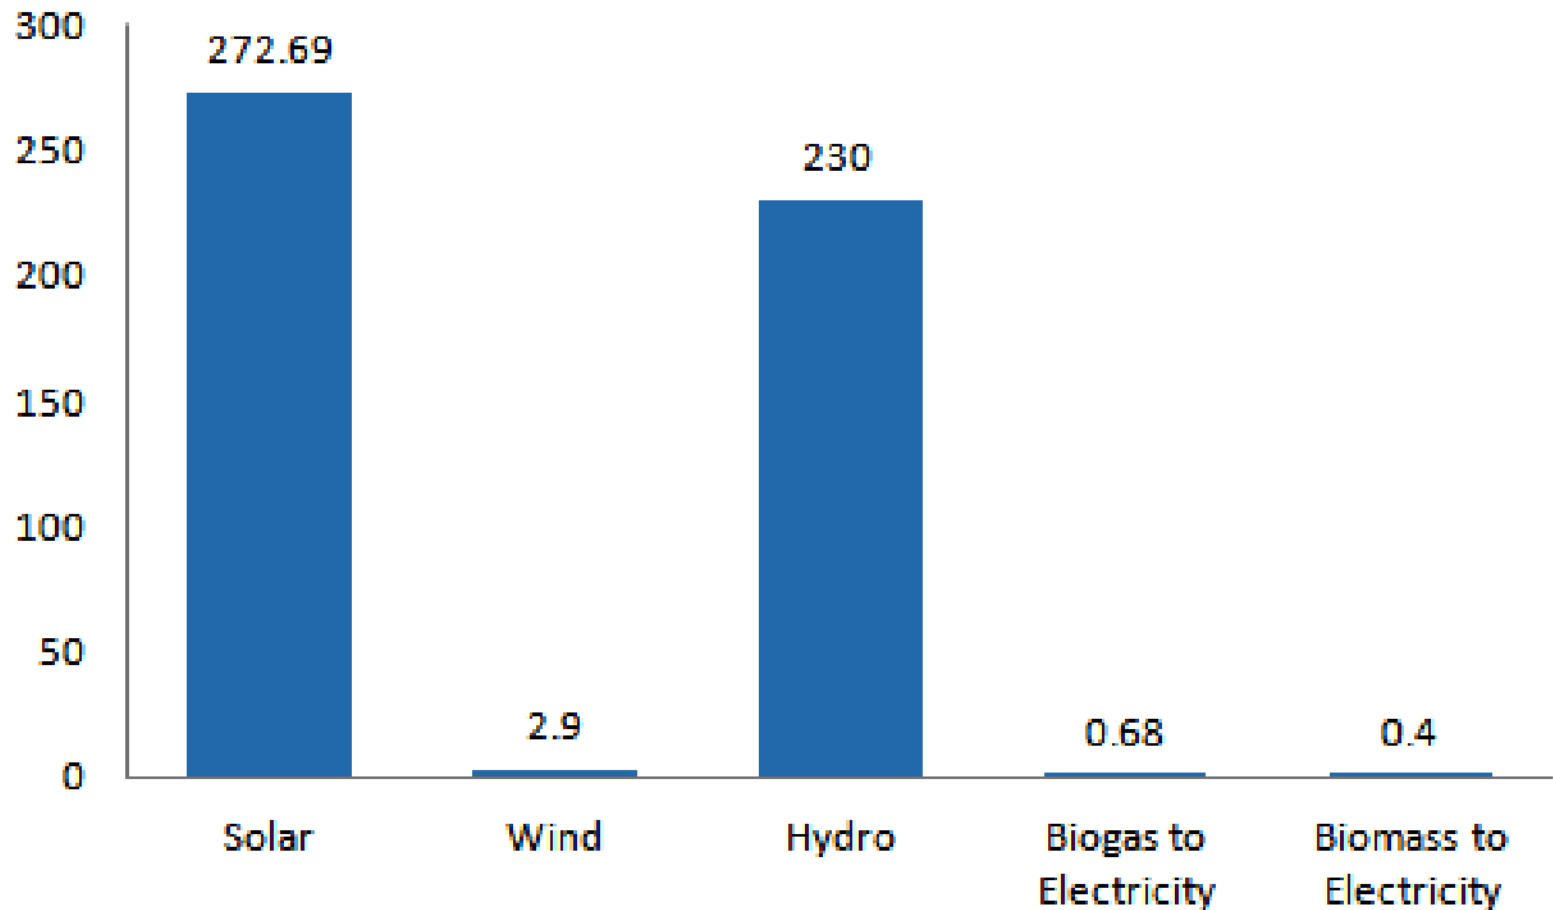

- ❑ Being a tropical country, Bangladesh is endowed with abundant supply of solar energy.
- ❑ The insolation in Bangladesh varies from 3.8 kWh/m<sup>2</sup>/day to 6.4 kWh/m<sup>2</sup>/day at an average of 5 kWh/m<sup>2</sup>/day.
- ❑ Rainy days may be upto a few days at a time.
- ❑ These indicate that there are good prospects for Solar PV and Solar Thermal.

# Renewable Energy Policy

- ❑ Effective from 2008.
- ❑ Objective:
  - Harness the potential of renewable energy resources;
  - Enable, encourage and facilitate investment in renewable energy projects;
  - Develop sustainable energy supplies;
  - Scale up contributions of renewable energy;
  - Promote use of renewable energy;

# Installed Renewable Energy (MW)

Total: More than 500 MW (Source: <http://www.sreda.gov.bd/>)

## Renewable Energy (BREB)

| Sl. No.                                       | Description   | Quantity Installed (Nos.) | Installed Capacity (kWp) |
|---|---|---------------------------|--------------------------|
| 01.   | SHS Installed under different projects  | 15,250                    | 825.50                   |
| 02.   | SHS against PBS New Consumer Connection as per govt. rules (up to 30-04-2018) | 30,946                    | 5,933.95                 |
| 03.   | Roof Top Solar Plant: BREB H/Q Training Academy Building                      | 1                         | 49.00                    |
| 04.   | Roof Top Solar Plant: Upazila Complex Building                                | 15                        | 450.00                   |
| 05.   | Solar Powered Irrigation Pump   | 40                        | 239.00                   |
| 06.   | Roof Top Solar Plant: At PBS Offices  | 21                        | 44.41                    |
| 07.   | Solar Charging Station  | 9                         | 198.00                   |
| <b>Total Installed Capacity of PV System:</b> |   |                           | <b>7,739.86</b>          |

# Potential of Solar Irrigation Pump

## Potential of Solar Irrigation Pump (1/3)

- ❑ Bangladesh is based on agricultural economy which contributes about 20% of the GDP.
- ❑ More than 70% of Bangladesh's population and 77% of its workforce lives in rural areas.
- ❑ 87% of rural households rely on agriculture.
- ❑ In Bangladesh about 60% land is suitable for cultivation, of which 90% land is dependent on irrigation.
- ❑ Currently there are more than 1.4 million diesel-run pumps for agricultural irrigation, consuming about 0.9 million tons of diesel per year to run these pumps at a subsidized rate, while emitting more than 31 million tons of CO<sub>2</sub> per year.

# Potential of Solar Irrigation Pump (2/3)

All Irrigation Pumps

Electricity Operated Pumps

Source of information: Summary of irrigation equipment used, area irrigated and benefited farmers: 2016-17, BADC.

## Potential of Solar Irrigation Pump (3/3)

- ❑ In addition, there are more than 350,000 grid connected electric irrigation pumps.
- ❑ During the peak irrigation season 2000 MW of power demand is solely required for running the electricity operated pumps which is provided at a subsidized rate.
- ❑ A significant amount of subsidy shall be reduced if a portion of diesel & electricity driven pumps could be replaced by solar irrigation pump gradually.

# Advantage of Solar Powered Irrigation

- ❑ Financing and cost of solar panels continue to drop.
- ❑ Rural electrification and access to renewable energy.
- ❑ Independence from volatile fuel prices and unreliable and costly fuel supplies.
- ❑ Reduced cost for water pumping in the long run.
- ❑ Potential for increasing agricultural productivity and income due to improved access to water.
- ❑ Potential for income diversification due to multiple uses of energy.
- ❑ Potential for new and innovative forms of financing and service models.

# Solar Irrigation Experience

Cheerful kids playing with water

Fulfilling the need for drinkable water

Golden field – wonder of solar irrigation pump

# Evolution of Solar Irrigation System in Bangladesh (1/2)

- 1997 – Introduction of solar pump in Bangladesh by BREB.
- 2002 – Introduction of solar irrigation pump in Bangladesh.
- 2005 – First solar submersible pumps at four villages in Barindro.
- 2008 – First solar drip irrigation pump.
- 2009 – First successful demonstration of rice irrigation (BADC, Savar).
- 2010 – First farmer community owned solar pump project at Barguna (8.4 KWp, Commercial Bank Loan, NGO Implementation).
  - Trial solar irrigation project with grant (IDCOL, Chapai Nawabganj).
- 2011 – 3 Solar irrigation pumps in Barishal, Magura and Jamalpur (BARI, GoB fund).

# Evolution of Solar Irrigation System in Bangladesh (2/2)

- 2011-12 – Commercial replication of private bank loan model: 10+ pumps.
- 2012
  - 20 trial large solar irrigation pump full grant project (BREB, CCTF).
  - 20 large solar irrigation pump full grant project (BREB, KOICA).
  - 7 large solar irrigation pumps with buried pipe networks (BADDC, GoB fund).
  - Installation of 16 large solar irrigation pump (IDCOL).
  - 200 pump project under IDCOL implementation process.

# Solar Irrigation Program in Bangladesh

| <b>Sl. No.</b> | <b>Organization</b>  | <b>Solar Pump Installation</b> |
|----------------|--|--------------------------------|
| <b>1.</b>      | <b>BREB</b>  | <b>40 Nos.</b>                 |
| <b>2.</b>      | <b>IDCOL</b>   | <b>923 Nos.</b>                |
| <b>3.</b>      | <b>BMDA</b>  | <b>105 Nos.</b>                |
| <b>4.</b>      | <b>BADC</b>  | <b>38 Nos.</b>                 |
| <b>5.</b>      | <b>Other agencies (e.g. DOE, RDA, DAE, BRRI, BARI, etc.)</b> | <b>10 Nos.</b>                 |
| <b>Total:</b>  |  | <b>1,116 Nos.</b>              |

## Solar Irrigation Experience of BREB (1/2)

Until now, BREB installed 40 Solar Irrigation Pumps, handed over to PBSs. PBSs are the owner of the pumps and responsible for O&M.

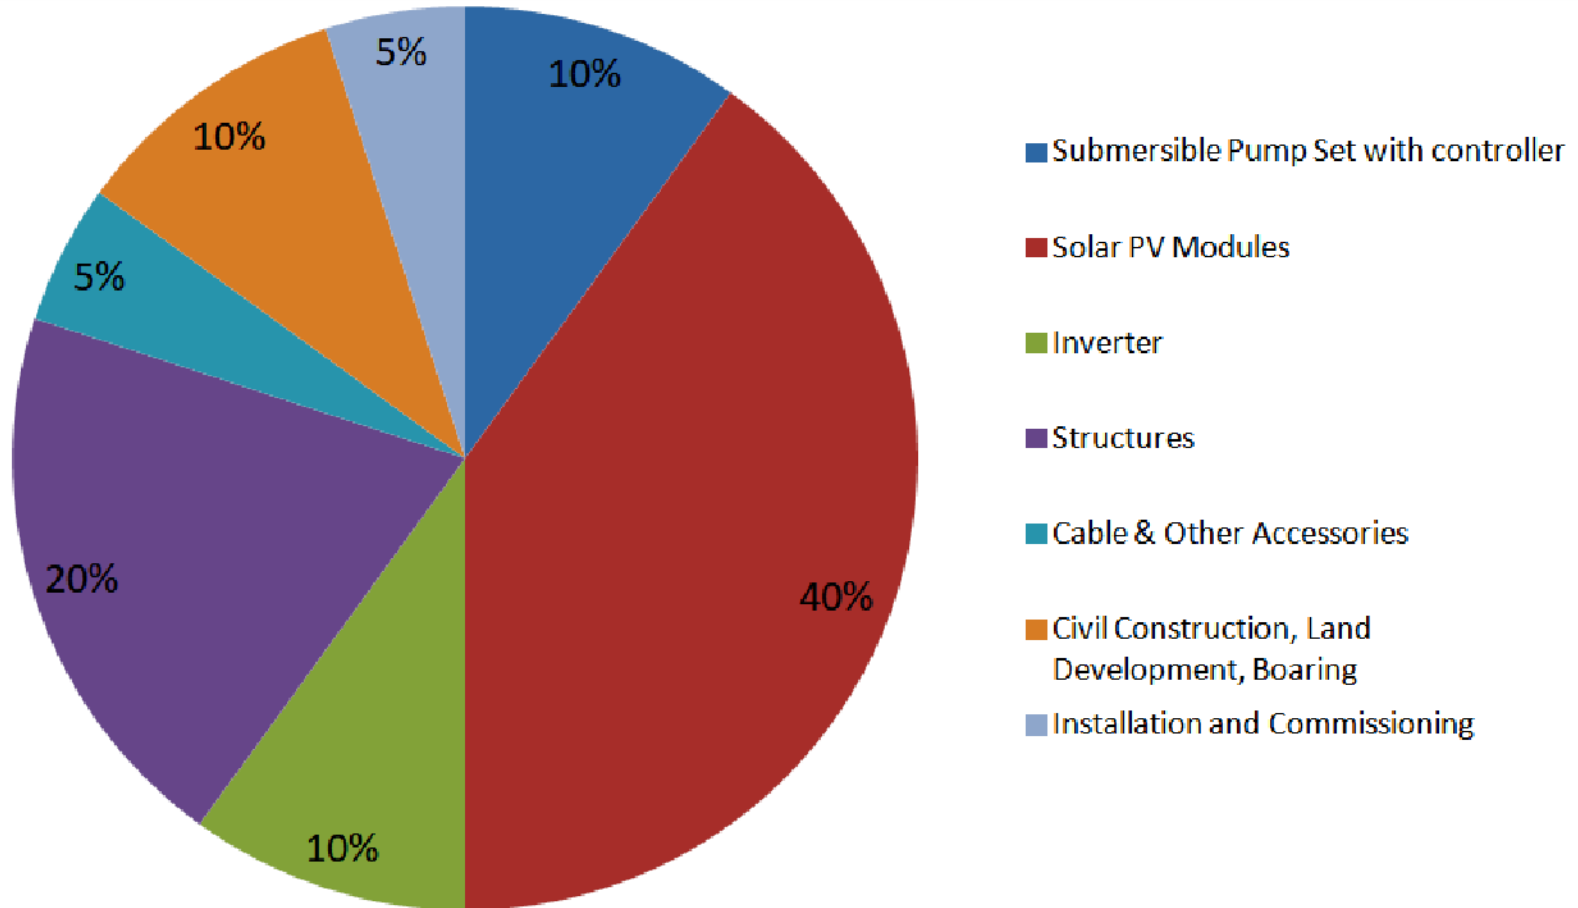

| <b>Description</b> | <b>SPIP</b>       | <b>CCTF</b>       |
|--------------------|-------------------|-------------------|
| <b>Funding</b>     | <b>KOICA</b>      | <b>GOB</b>        |
| <b>Pumps</b>       | <b>20</b>         | <b>20</b>         |
| <b>SHS</b>         | <b>1250</b>       | <b>300</b>        |
| <b>Cost</b>        | <b>3.83 MUS\$</b> | <b>1.34 MUS\$</b> |

## Solar Irrigation Experience of BREB (2/2)

BREB developed a beneficiary community & they are responsible for:

- Safety & security of the pump from any damage or pilferage.
- Pay for the replacement of any component when necessary.
- Pay Tk. 6000 per season.
- Regular pump operation.
- Recording the pump operational data.
- Proper Utilization of pump water.
- Tax payment of land (pump site).

# Solar Pump Components

# Challenges in the Adoption of the Technology in Rural Bangladesh

## Challenges in the Adoption (1/3)

- ❑ Still relatively high initial investment costs.
- ❑ Finance is not accessible or affordable for all.
- ❑ Banks often perceive that SPIS have high risk, due to unfamiliarity with technology.
- ❑ Sustainable Business Model – affordability & economic viability of solar-powered irrigation systems.
- ❑ Tariff fixation in accordance with project cost and revenue collection.
- ❑ Proper site selection based on regional crop pattern, soil properties & water level. .

## Challenges in the Adoption (2/3)

- ❑ Design needs to be fit-for-purpose – e.g. ensuring water delivery during winter morning.
- ❑ Standardization and quality control of products and services.
- ❑ Grid feeding mechanism.
- ❑ Use of surplus power in non-irrigation season.
- ❑ Water and energy management
- ❑ Installation of the system, operation and maintenance – optimal operation and maintenance of SPIS requires a certain degree of technical knowledge and skill.

## Challenges in the Adoption (3/3)

- Ownership transformation.
- Long term O&M policy formulation.
- Lack of trust between farmers, utilities, service providers and government to try innovative forms of finance and of FITs;
- Vulnerable to theft and hence often not covered by insurance.
- Alternate use of the PV system during non-irrigation periods e.g. Grid Feeding, Rice Husking, Battery Charging, etc.

# Solar Photovoltaic Pumping for Agricultural Irrigation Project

# Proposed Project Summary

|                                   |  |
|-----------------------------------|--|
| Project Title                     | : Solar Photovoltaic Pumping for Agricultural Irrigation.          |
| Sponsoring Ministry/Division      | : Ministry of Power, Energy & Mineral Resources/ Power Division    |
| Implementing Agency               | : Bangladesh Rural Electrification Board (BREB).                   |
| Development Partner/ Donor Agency | : Asian Development Bank (ADB)<br>[ADB Loan 2769-BAN, Part B (iv)] |

# PROJECT FINANCING

Loan - US\$ 20.00 Million [Loan 2769-BAN (iv)]

Grant - US\$ 25.442 Million

US\$ 22.220 Million (SREP grant, confirmed through email)

US\$ 3.000 Million (Output based Aid grant)

US\$ 0.222 Million (Additional from SREP for consulting service)

# Objective

## **Main Objective:**

Diffusion of solar PV pumping system for agricultural irrigation and reduction of sudden thrust on grid power during irrigation season in project area.

## **Specific Objective:**

- To install 2000 nos. of solar PV irrigation pumping systems in project area.
- To generate electricity using solar PV systems.
- To introduce a long term O & M strategies with effective return of investment.

## Usage

- Irrigation for paddy, vegetables, aquaculture farming, mixed crops etc.
- Use of generated electricity in the locality during off season (no demand of water) for various purposes beneficial to the locals.

# Project Scope

| SL | Irrigation System |      | Panel Capacity (kWp) | Land Required for Panel (Decimal) | Irrigation Area | Pumping Sets |
|----|-------------------|------|----------------------|-----------------------------------|-----------------|--------------|
|    | kW                | HP   |                      |                                   |                 |              |
| a) | 2.2               | 3.0  | 4.32                 | 0.99                              | 21.33           | 490          |
| b) | 4.0               | 5.5  | 7.56                 | 1.74                              | 38.80           | 530          |
| c) | 5.5               | 7.5  | 10.80                | 2.48                              | 53.36           | 500          |
| d) | 7.5               | 10.0 | 14.08                | 3.22                              | 72.74           | 320          |
| e) | 11.0              | 15.0 | 20.52                | 4.71                              | 106.66          | 160          |

# Project Area

| Sl. No. | Name of PBS |
|---------|-------------|
| 1       | Thakurgaon  |
| 2       | Dinajpur-1  |
| 3       | Rangpur-2   |
| 4       | Bogura-1    |
| 5       | Naogaon-2   |
| 6       | Gopalganj   |
| 7       | Faridpur    |
| 8       | Madaripur   |
| 9       | Comilla-2   |
| 10      | Feni        |

- Project will be implemented in 10 districts.
- 10 PBSs are primarily proposed as reference based on the feasibility study conducted by ADB consultant.
- Final site would be selected after consultant's recommendation during project preparation period.

# Project Phases (1/2)

## □ **Project Preparation Phase**

- Appointment of Management & Supervision Consultant.
- Detailed Feasibility Study and Finalization of Business Model.
- Social & Environmental Safeguard Policy.
- Public awareness Programs.
- Identification of Location and Users.
- Formation of Farmers' community.
- Agreement between PBS and Community.
- System Design, Specification, BOQ and Bid Document Preparation.

## Project Phases (2/2)

### **□ Project Implementation Phase**

- Tendering Process
- Installation of Pumps through turn-key solution.
- Operation through Farmers' community.

### **□ Project Operation & Maintenance Phase**

- Dedicated O&M set-up at each PBSs.
- Service through contractors up to warranty period.
- Monitoring and evaluation.

# Sponsor/Location Selection Criteria

- Present underground water level (static water level) and projection of water table depletion in the next 20 years;
- Quality and quantity of water for irrigation;
- Solar irradiance level;
- Crop pattern;
- Income levels of farmers;
- Transportation infrastructure to major cities to supply the crops;
- Local community's knowledge about solar pumping systems;
- Potentials to work cluster wise;
- Mixed grid and off-grid areas; and
- Presence of suppliers in the areas.

## Business Model (1/2)

- ❑ 15% of the effective cost as down payment and rest amount in equal instalment.
- ❑ BREB/PBS will be the owner of a solar pumping system before the ownership transfer.
- ❑ Ownership of a solar pumping system will be transferred after the sponsor/farmer pays all the instalments.
- ❑ The cost of the system (excluding grant portion) will be recovered within 10 years.

## Business Model (2/2)

- ❑ Sponsor/Farmer's Income:
  - Water charge of BDT 3000/Bigha/Year.
  - Alternate use of the PV system during non-irrigation periods e.g. Rice Husking, Battery Charging, etc.
- ❑ The implementation and supervision consultant will finalize the business model.

## O & M

- ❑ The systems will be under 3-5 years warranty from the EPC (Turn-key) contractor.
- ❑ Training will be provided to sponsor's/farmer's for O & M.
- ❑ If needed, pump will be replaced every five years and inverter will be replaced every ten years from the project cost under O & M.
- ❑ BREB/PBS will support/assist the sponsor for O & M but it will be the sponsor's responsibility.

# Conclusion

- ❑ Success of this pilot project will encourage large scale implementation of solar photovoltaic irrigation pump projects.
- ❑ Cooperation and continuous support from ADB and other stakeholders is very crucial for successful implementation, operation and maintenance of the project.

THANKS
