Energy and Climate Change
in ASEAN: ACE Survey**

ASEAN Climate Change and Energy Project

- The ASEAN Climate Change and Energy Project (ACCEPT) aims to support ASEAN in **improving the coherence between the ASEAN energy and climate policies and contribute to more climate-friendly development of the energy sector.**

7 AFFORDABLE AND
CLEAN ENERGY

13 CLIMATE
ACTION

“

We welcomed the ACCEPT to support ASEAN in improving the coherence between the ASEAN energy and climate policies and contribute to more climate-friendly development of the energy sector.

”

Joint Ministerial Statement (JMS)
of the 37th The ASEAN Ministers on
Energy Meeting (AMEM),
Bangkok, 4 September 2019.

ACCEPT

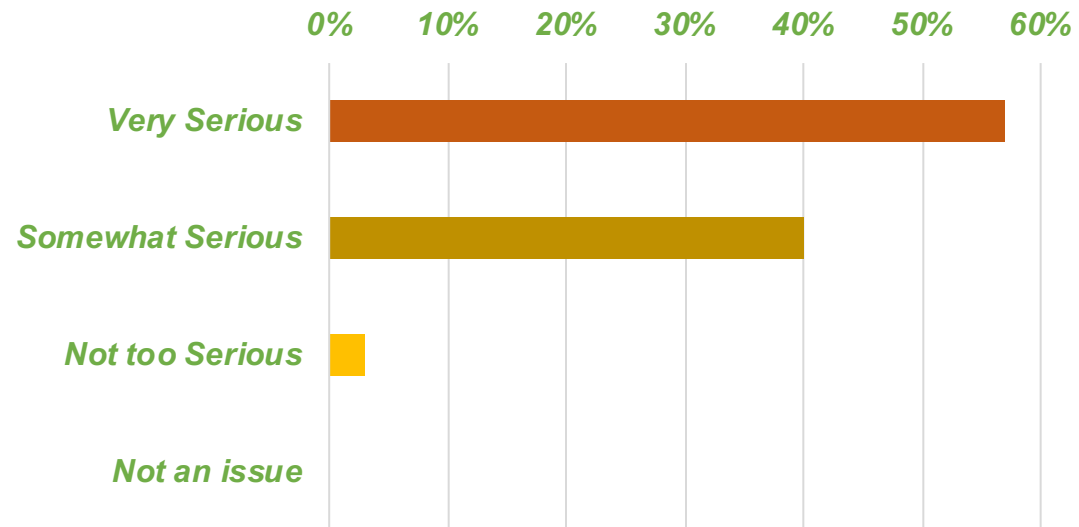

ASEAN Climate Change and Energy Project

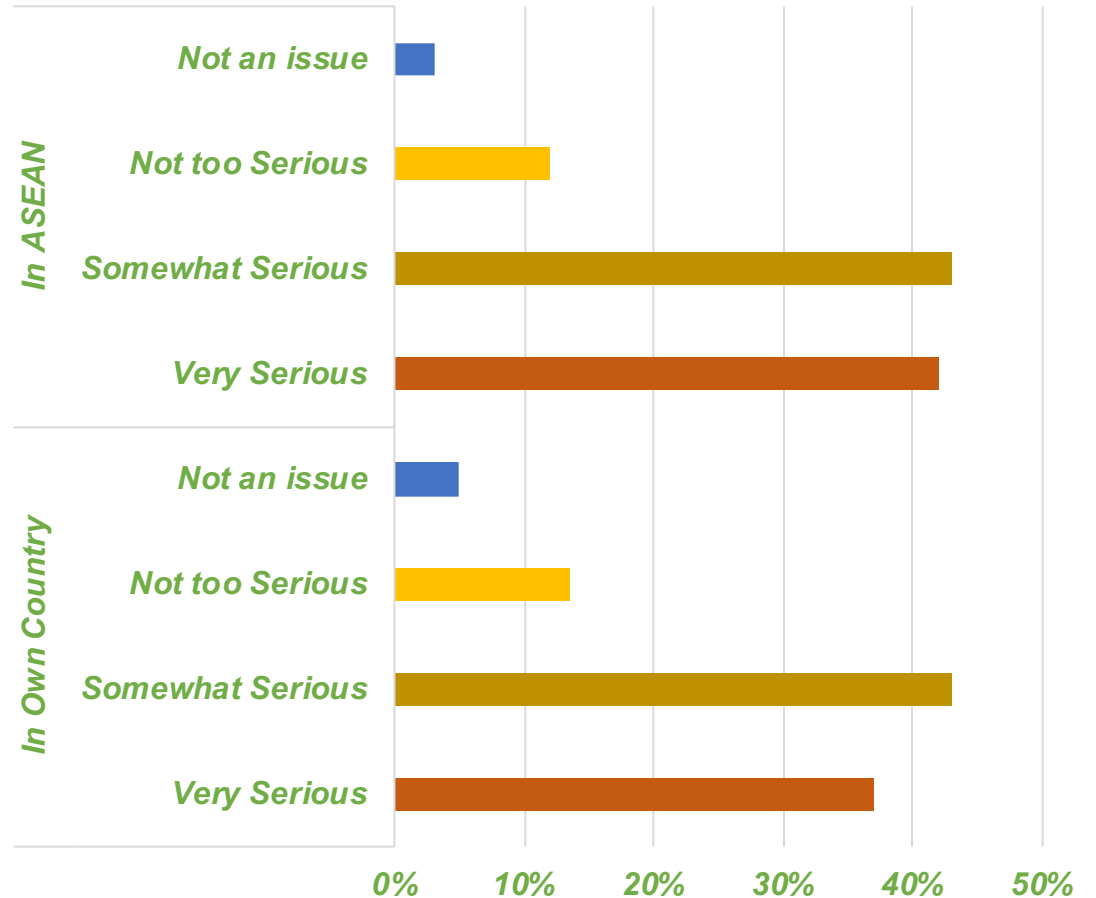

COVID-19 situation is very serious

*... impact on energy and climate
is equally egregious*

How serious the situation?⁽¹⁾

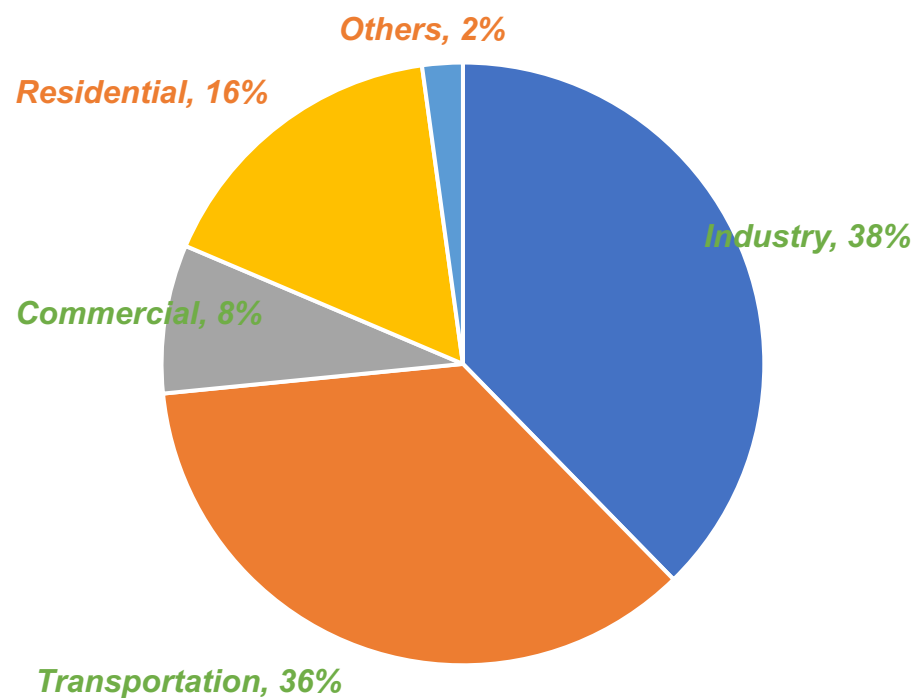

How serious the impact on energy & climate change?⁽¹⁾

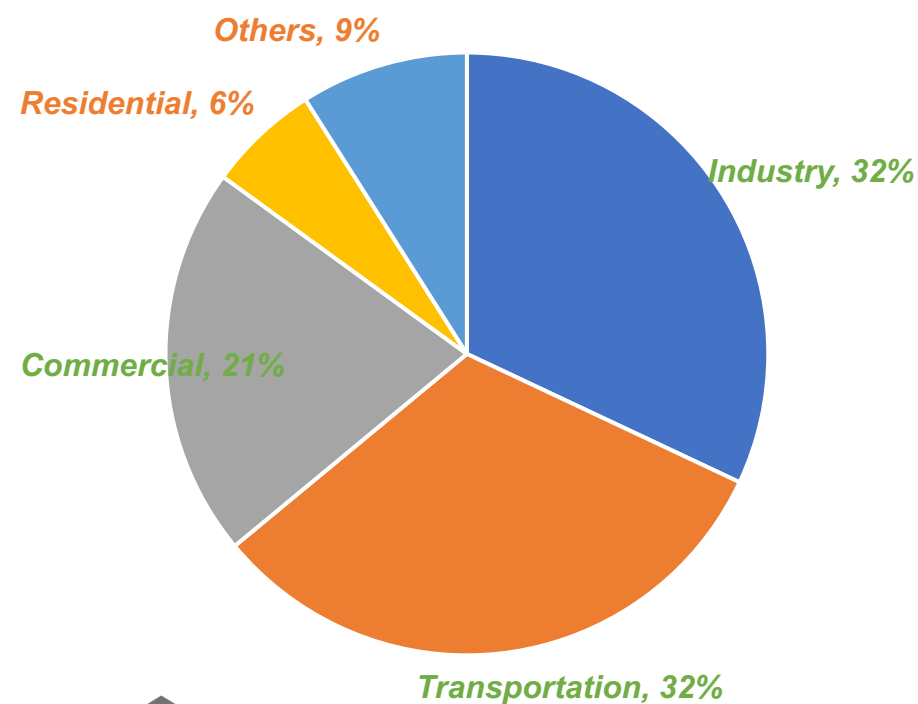

Transportation, Industry and Commercial are the most impacted sectors

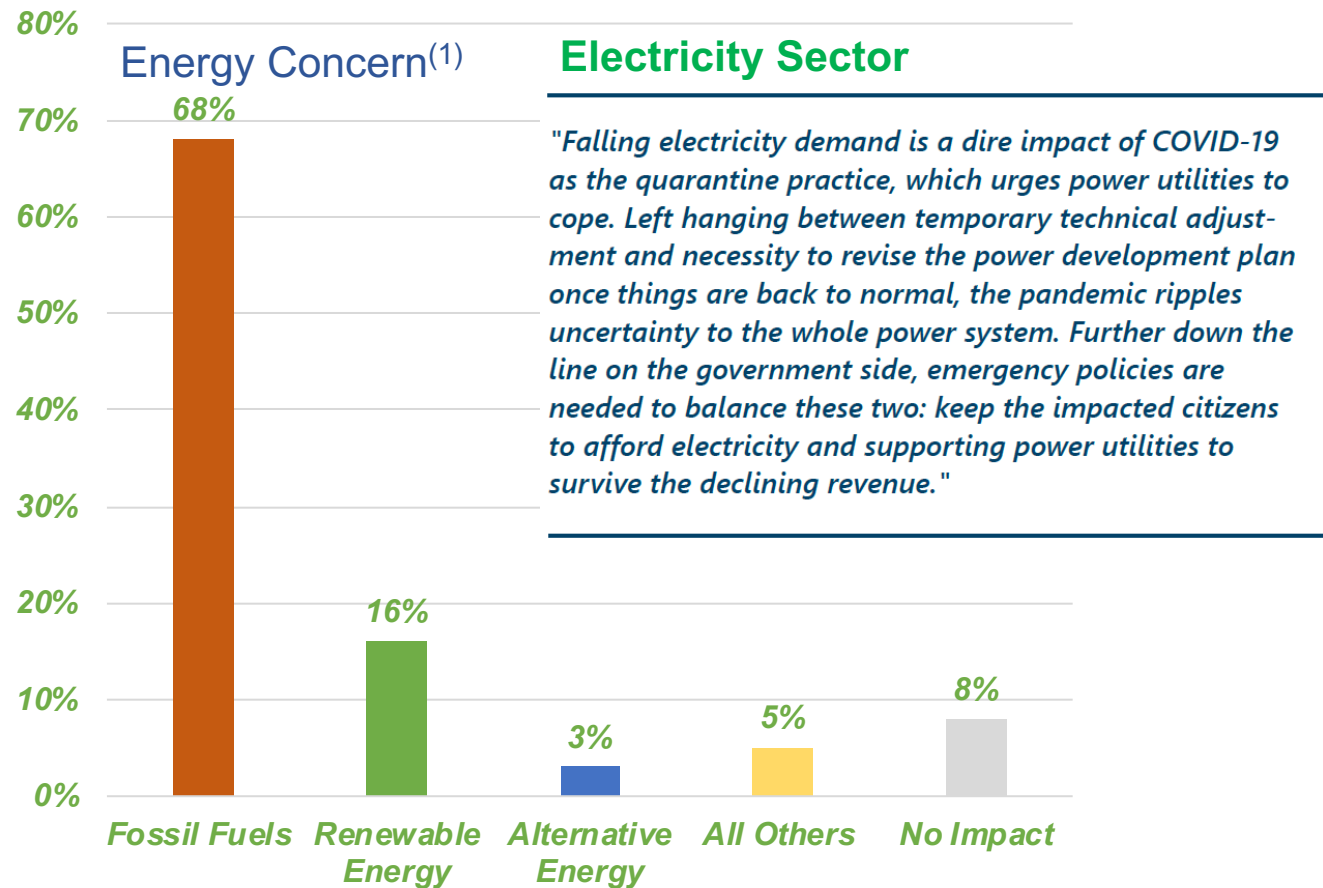

Final Energy Mix⁽²⁾

Sectoral Concern⁽¹⁾

Affecting fossil fuels the most, but RE is also to be hit

Around 80% of Primary Energy Supply is supplied by Fossil Fuels.

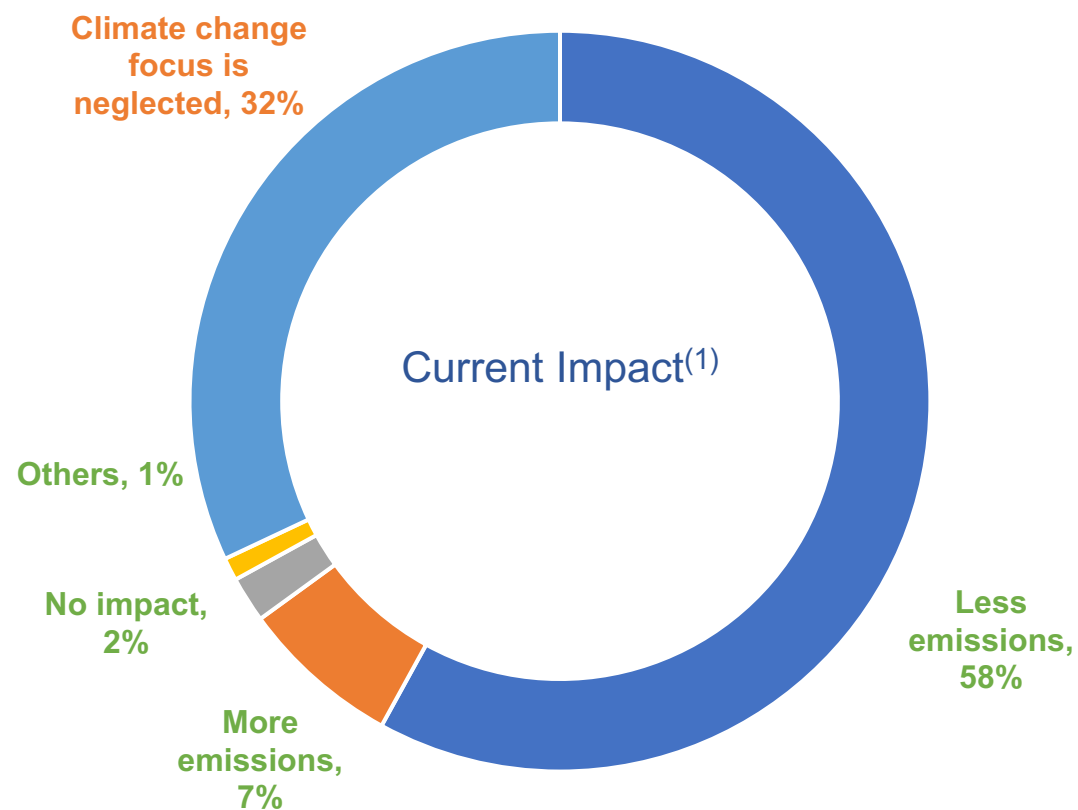

Oil & Gas Sector

"Plunge in demand, supply glut, and plummeting price—even touching minus point—have made oil and gas market gloomy especially in ASEAN countries. Even so, some positive impacts may be felt by oil importing countries, while fuel price reduction to some degree can ease the social effect of COVID-19. Although this might be a signal of economic slowdown, optimism remains and keeps oil and gas sector afloat in this troubled period."

Renewable Sector

"Renewable energy sector is also inevitably hit by this pandemic, remarkably under the disrupted supply chain and logistic which cause inevitable postponed projects. This pandemic creates both, opportunities and threat to RE as target and priorities of government are still on the fence. However, there is an optimism that this pandemic could shine a silver lining on how to progress with the energy transition and shape the RE industries once the economy bounces back."

Temporary clear skies, but somehow climate change focus is neglected

What's Next?

Maintain the low-emission activities when everything is back to normalcy later

Protect the environment, and thus combating climate change

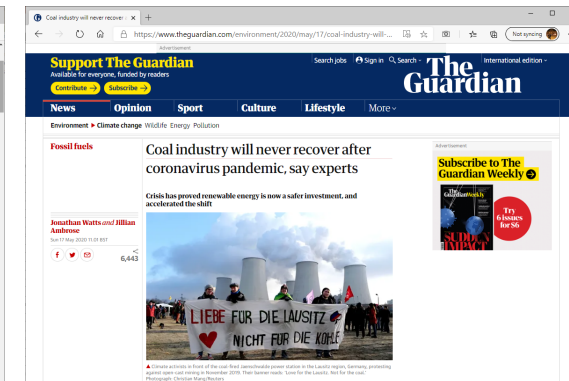

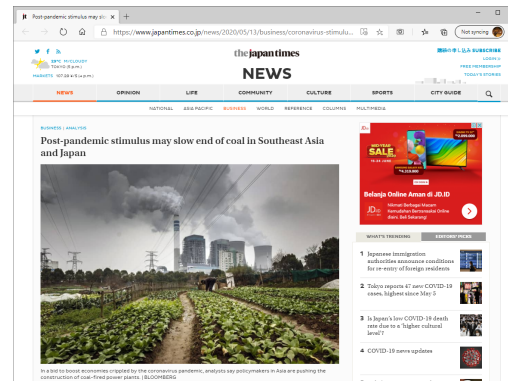

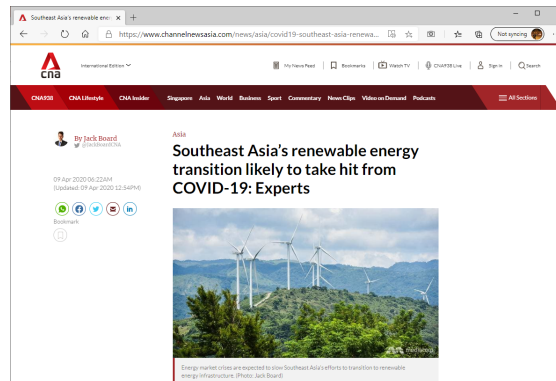

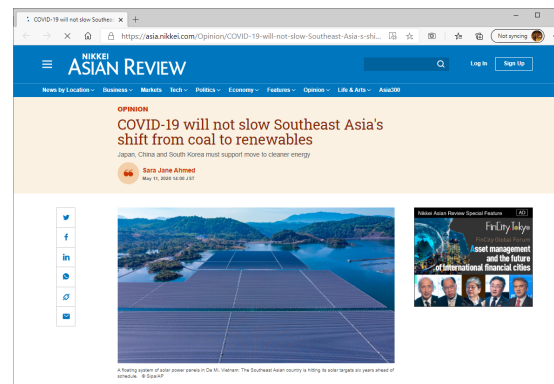

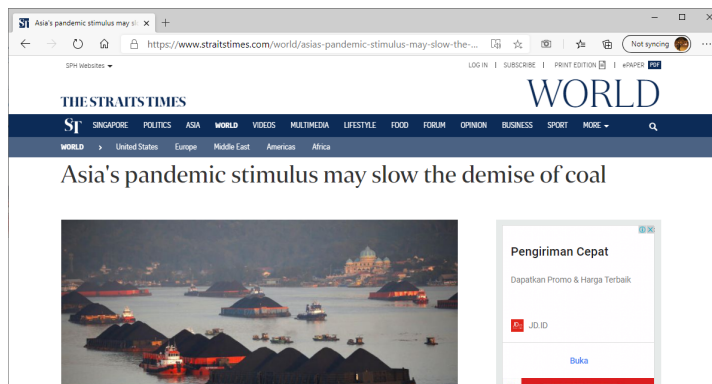

Infuse a more sustainable economy and environment-friendly activities in our daily lives

Last but not least, opinion matters the most

So, what is actually happened? What is going to happen next? #BuildBackBetter?
