

The Problem

Traditional cooking methods create health and time related issues within families

Decreased lung health

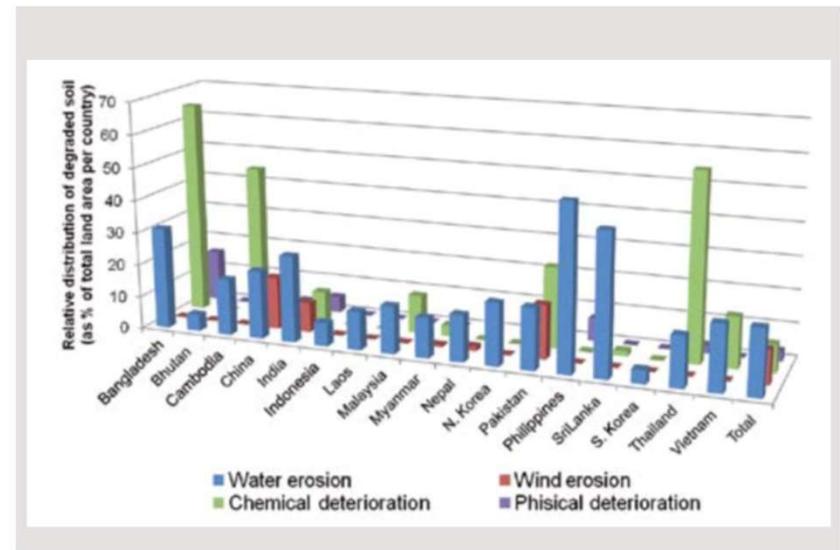

Bottled gas costs an average \$411/year

20hrs per week to cook with wood compared to modern cooking

Bad soil management is now one of the leading risks to global food supply and farmer income

Soil degradation rates in Asia

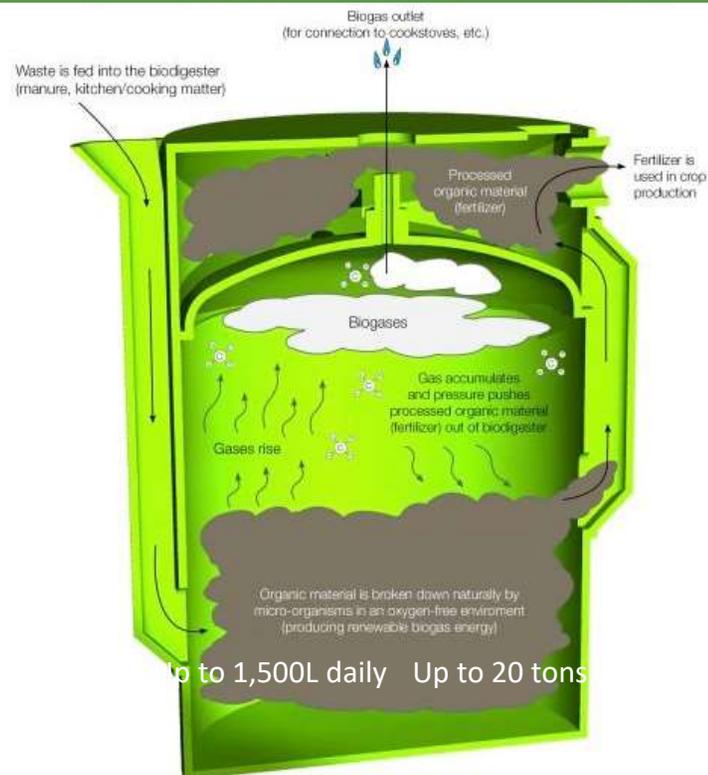

62% of soils in Bangladesh, 41% in Cambodia and 40% in Philippines are already classified as degraded.
