Energy Transition in Southeast Asia

From Biogas and Biomethane to clean and green H2

Carsten Dommermuth
Dipl.-Ing. MBA, Vice President
Vice President & Managing Director APAC
INNIO’s Jenbacher brand
Green hydrogen can be a tool to enhance energy security and accelerate decarbonization not only in Southeast Asia.

At INNIO, we integrate green H2 into our Jenbacher solution development

**March 28, 2023** To convert green electricity to green hydrogen (H2) for its power-to-hydrogen-to-power project, INNIO has ordered two electrolyzers with a total capacity of 2 megawatts (MW) from H-TEC SYSTEMS.

**March 8, 2023** The largest gas engine power plant in Germany with 190 MW, powered with 20 Jenbacher engines will be converted to green Hydrogen up to 2023.

Carsten Dommermuth is the Vice President and Managing Director for the APAC region for INNIO’s Jenbacher product brand. He is based in Singapore.

For more than 20 years, Carsten has held leadership positions at various major international energy companies in sales, after sales service, sales support, business, and product development.

His responsibilities have included the development of the EPC and IPP business covering gas-to-power and LNG solutions as well as liquid and gaseous biofuels and hydrogen.

Carsten has a degree in mechanical engineering and an MBA in corporate management. He also received project finance training at Boston University.

Richard Richard
Senior Sales Manager,
Indonesia & the Philippines

Jakarta Office:
PT. Jenbacher Engines Indonesia
12th Fl., The Manhattan Square Building
Jakarta, Indonesia, 12560

Mobile: +62 8129582829
richard.richard@innio.com

Richard is the Senior Sales Manager for Indonesia & the Philippines for INNIO’s Jenbacher brand and based in Jakarta.

Richard has 18 years professional background in the power industry working on both thermal and renewable power plants with different roles such as project management, project tendering, sales and after sales services, and business development at major multi-national companies.

He has gained experience for the development of EPC and IPP projects covering gas-to-power and small-scale LNG solutions as well as liquid and gaseous biofuels, and hybrid power plant.

Richard holds a degree in nuclear engineering and a master’s degree in management.
WHO WE ARE

1957
1st Jenbacher genset

65,000 m²
Brilliant manufacturing production space

~25,000
Jenbacher engines delivered

1,700
Employees
100 apprentices
Generating reliable and efficient power at or near the point of use
Jenbacher fleet at a glance

Advantages
- Overall efficiency of 90% or more
- Durability
- 65 years experience
- Fast-start capability
- Fuel flexibility
- Life-cycle services

25,000 delivered engines
60 million households*
1.5 x Germany*
60% of Jenbacher engines in operation are connected with myPlant*

250 kW → 10.6 MW
• Pipeline gas and renewable gases
• Special gas applications
• Power generation
• Combined Heat and Power
• Combined Cooling, Heat and Power

37 GW delivered globally
60% digitally-connected engines (myPlant)

ENERGY TRANSITION OPPORTUNITIES & SOLUTIONS
Energy transition in APAC is a marathon, not a sprint! And INNIO has the solutions

1 “Coal is still king in APAC”
Expand renewables, biogas and clean fuels, using gas as a bridge technology

2 Volatility vs. grid stability
Flexible, fast-starting, dispatchable power and tri-generating solutions

3 Infrastructure
Flexibility at point of use for fluctuating hydrogen mixes in the gas network
TROUBLED WATERS AND A NEW ORDER FOR THE GLOBAL GAS BUSINESS
Independence on supply is key for countries

Time for local fuel sources like biogas, biomethane, and virtual pipeline solutions to support independence

What this development means in numbers
- Base line over the last 15 years was a cheap, stable, and predictable gas and LNG market.
- Spot and futures at the leading gas markets up to March 2020 were in a range of 8 USD/MMBTU (27 USD/MWh)
- This development was the main driver for the huge investments in the LNG infrastructure for liquefaction and regasification.
- It had the momentum for the change from coal to gas in APAC

Lessons learned
- Countries with gas pipeline connections, e.g., Germany and parts of the EU, will actively work on alternative supply opportunities.
- Alternatives in (new) nuclear and new coal will be selective but need time to come online
- One main strong promoted feature will be LNG and the virtual pipeline business to unlock the risk of a single source of supply.
- Local fuel sources like biogas will stronger promoted for a more diversified local energy mix.
- Acceleration of alternative new fuels like Hydrogen

End-user power prices in APAC increased for dominant gas markets like Japan with +42%, South Korea +37% and Singapore with +31%*

New business models supporting Virtual pipelines with multi-supplier options & future-ready for the supply of liquefied biogas and H₂

*Wood Mackenzie’s Global Power Market Update, July 2022
By 2030, the expected value from sustainable fuels, upstream and downstream electrification, and hydrogen could exceed $1 trillion. During this decade, capital spending (an average of some $400 billion a year over five years) is likely to shift from fossil fuels to sustainable forms of energy, such as bio and synthetic fuels.
In 1874, science fiction author Jules Verne set out a vision that has inspired entrepreneurs ever since.

“Water will one day be employed as fuel, that hydrogen and oxygen which constitute it, used singly or together, will furnish an inexhaustible source of heat and light, of an intensity of which coal is not capable”.

Jules Verne, The Mysterious Island
The rise of hydrogen pilot cities in South Korea

As part of its effort to achieve carbon neutrality by 2050, the government of South Korea is working to transition hydrogen to be a vital engine of economic growth and job creation. To accomplish this, the government implemented a strategy focused on laying legal foundations to promote hydrogen. Enter the Hydrogen Economy Promotion and Hydrogen Safety Management Act ("Hydrogen Act"), an act passed into law by the Korean National Assembly that became the world's first hydrogen law that took effect in early 2021.

The Hydrogen Revolution in APAC*
“Hydrogen is already having, and will continue to have, a significant impact in the Asia-Pacific (APAC) region – the opportunity is already being embraced by Australia, Japan and the Republic of Korea in particular. Hydrogen offers the APAC region a practical option to reduce carbon emissions and fossil fuel dependency.”

Green Growth: Capturing Asia’s $5 trillion green business opportunity**
The addressable market size for green businesses in Asia is expected to reach between $4 trillion and $5 trillion by 2030. Entering the green space will come with risks, but also potential rewards for businesses that move early.

Southeast Asia is going green!
Transitioning to green with INNIO’s Jenbacher H₂ solutions

READY FOR H₂

All new Jenbacher engines are "Ready for H₂".

In general, “Ready for H₂“ Jenbacher units can be converted to operate on up to 100% hydrogen in the future. Details on the cost and timeline for a future conversion may vary and need to be clarified individually.

Furthermore, models can be offered with the option to operate with up to 25% (vol) H₂ in the pipeline gas.

Type 4 engines are offered for 100% H₂ operation.

From 2025 onwards INNIO’s entire Jenbacher product line is expected to be rolled out for 100% hydrogen operation.
Singapore will commit to the goal of achieving net-zero emissions by 2050, as well as aim to reduce emissions to 60 MtCO2e by 2030 after peaking emissions earlier.

- **Singapore aims to supply up to 50 per cent of its power needs with hydrogen by 2050**

For a start, it will launch an expression of interest for commercial projects using ammonia - a derivative of hydrogen for power generation.

Singapore will also scale up supply chains for low-carbon hydrogen, among other steps, to ensure it reaches its hydrogen goal.

- **Carbon Tax – first real incentive for change**

5 SGD Singapore dollars per ton of CO2 equivalent in 2022 to about 50-80 dollars by 2030.

- **International cooperating (with Australia at Oct 18)**

Singapore, Australia sign Green Economy Agreement with 17 initial projects.

H₂ own production for supply to test beds

**Jenbach, Austria – March 28, 2023**

To convert green electricity to green hydrogen (H₂) for its power-to-hydrogen-to-power project, INNIO has ordered two electrolyzers with a total capacity of 2 megawatts (MW) from H-TEC SYSTEMS. This represents a critical step in realizing the company’s sustainable hydrogen product strategy as part of which all new Jenbacher plants are already “Ready for H₂” today. The entire Jenbacher engine product line is expected to be rolled out for 100% hydrogen operation as of 2025. At the same time, the supply of green hydrogen at the Jenbach site represents a milestone on the way to net zero operations on site.

**Simulation of hydrogen content in traditional gas**

Energy Transition is a Marathon, not a Sprint

The transition from hydrocarbons to clean fuels becomes viable only with explicit business incentives.

Necessary clean fuel support can be ensured through strategic energy policies, tax reforms, and incentives, enabling decarbonization within the industry and power sectors.

Rapid installation of electrolysis capacities in regions abundant in wind, photovoltaic, hydro, and geothermal power is imperative.

Our Sales contact will follow up with you.
INNIO is a leading energy solution and service provider that empowers industries and communities to make sustainable energy work today. With our product brands Jenbacher and Waukesha and our digital platform myPlant, we offer innovative solutions for the power generation and compression segments that help industries and communities generate and manage energy sustainably while navigating the fast-changing landscape of traditional and green energy sources. INNIO is individual in scope, but global in scale. With our flexible, scalable, and resilient energy solutions and services, we enable our customers to manage the energy transition along the energy value chain wherever they are in their transition journey.

INNIO is headquartered in Jenbach (Austria), with other primary operations in Waukesha (Wisconsin, U.S.) and Welland (Ontario, Canada). A team of more than 4,000 experts provides life-cycle support to the more than 55,000 delivered engines globally through a service network in more than 100 countries.

INNIO’s improved ESG Risk Rating again secures the number one position across more than 500 companies globally in the machinery industry assessed by Sustainalytics.
