

Resilient energy systems against extreme weather events

4 June 2025

Increasing Impacts of Extreme Weather Events on Energy Systems

	Climatic Impact-driver																										
			Heat and Cold				Wet and Dry								Wind				Snow and Ice						Coastal		
Energy sector	Energy activity	Mean air temperature	Extreme heat	Cold spell	Frost	Mean precipitation	River flood	Heavy precipitation and pluvial flood	Landslide	Aridity	Hydrological drought	Agricultural and ecological drought	Fire weather	Mean wind speed	Severe wind storm	Tropical cyclone	Sand and dust storm	Snow, glacier and ice sheet	Permafrost	Lake, river and sea ice	Heavy snowfall and ice storm	Hail	Snow avalanche	Relative sea level	Coastal flood	Coastal erosion	
Hydropower	Resources (dammed)																										
	D&O (dammed)																										
	Resources (undammed)																										
	D&O (undammed)																										
Wind power	Capacity factors																										
	D&O (onshore)																										
	D&O (offshore)																										
Solar power	CF (PV)																										
	CF (CSP)																										
	D&O																										
Ocean energy	Resources							_																			
Bio-energy	Resources																										
Thermal power plants (incl nuclear)	Efficiency Vulnerability																										
ccs	Efficiency																										
Energy consumption	Heating																										
	Cooling																										
Electric power	D&O																										
transmission system	Vulnerability																										
Relevance of the c	limate impact driver:	Positive	e	Posit	ive or n	egative		Negati	ve

Fuel supply

- Floods, droughts and wildfires can negatively affect biofuel production, critical minerals mining and fuel transportation.
- Tropical cyclones coupled with sea-level rise could disrupt major fuel production and storage areas on the coasts.

Electricity Generation

- Floods and droughts require adaptation measures for hydro power plants.
- Extreme heat events increase the need for cooling options for solar PVs.
- Rising water temperature and reduced water availability put additional challenges to thermal power plants.
- Intensifying tropical cyclones in some areas reduce power generation from wind turbines.

Electricity Transmission and Distribution

• Extreme weather events test the physical resilience of electricity transmission and distribution networks.

Energy Demand

- Extreme heat events drive higher demand for cooling.
- Frequent droughts increases electricity consumption

Multiple Benefits of Enhancing Climate Resilience of Energy Systems

Deep Dive Workshop Agenda

09:00-09:10	 Opening remark: Toru Kubo, Senior Director, ADB (10 min)
09:10-09:20	• Introduction of the workshop with a short scene-setting presentation: Jinsun Lim, Climate Change Specialist, ADB (10 min)
09:20-09:30	Group photo (10 min)
09:30-10:00	 Discussion 1. Are extreme weather events an increasing concern? (30 min) Michiya Hayashi, Senior Researcher, National Institute for Environmental Studies, Japan Madhurima Sarkar-Swaisgood, Deputy Chief of Disaster Risk Reduction, UN Economic and Social Commission for Asia and the Pacific (ESCAP)
10:00-10:30	 Discussion 2. How do extreme weather events affect energy system resilience? (30 min) Henri Paillere, Head of Planning and Economic Studies Section, International Atomic Energy Agency (IAEA) Wil Smith, Regional Manager of Southeast Asia and India, EPRI
10:30-11:00	• Break
11:00-11:40	 Discussion 3. How can we strengthen resilience through investments and systemic changes? (40 min) Len George, Principal Energy Specialist, ADB Selena Jihyun Lee, Energy Specialist, World Bank Jhan Chan, Australasia Energy Transmission and Distribution Technical Leader, Arup
11:40-12:20	 Discussion 4. How can policies and capacity building activities support building resilient energy systems? (40 min) Atty. Rachel Anne Herrera, Commissioner, Climate Change Commission, Philippines H.E. Chhe Lidin, Under Secretary of State, Ministry of Mines and Energy, Cambodia Ana Diaz, Program Manager, International Organization for Standardization (ISO)
12.20-12.30	Clasing remark: Neelle O'Prion, Director Climate Change, ADP (10 min)
12.20 12.30	Closing remark. Noelle O Brief, Director Climate Change, ADB (10 min)

THANK YOU
